- 1 (currently amended): A method for managing incoming calls of a mobile phone, the mobile phone comprising a control circuit and a volume detector, the method comprising:
  - (a) receiving a call signal with the mobile phone;
  - starting a timer to measure a predetermined period of time when the call signal is received;
  - (b) detecting environmental volume surrounding the mobile phone with the volume detector after the predetermined period of time has elapsed;
  - (e) executing a first managing process with the control circuit when the detected surrounding volume exceeds a predetermined value, or executing a second managing process with the control circuit when the detected surrounding volume does not exceed the predetermined value.
- 2 (original): The method of claim 1 wherein the first managing process comprises vibrating the mobile phone.
- 20 3 (original): The method of claim 1 wherein the mobile phone comprises a speaker and the first managing process comprises playing a ringing tone.
  - 4 (original): The method of claim 1 wherein the second managing process comprises vibrating the mobile phone.
  - 5 (original): The method of claim 1 wherein the first managing process comprises increasing the volume of a ringing tone.
